

- PRINT NAME _____
- Write version on your blue book and
hand in this exam inside your blue book.
- Put your name, ID number, and section number (or time) on your blue book.
- You may have ONE 2-sided page of notes. NO CALCULATORS are allowed.
- You may leave square roots in your answers, but NO trig functions.
- **You must show your work to receive credit.**

VERSION A

1. (12 points) In this problem,

- \mathbf{a} , \mathbf{b} and \mathbf{c} are vectors in \mathbb{R}^3 (space),
- \mathbf{u} , \mathbf{v} and \mathbf{w} are vectors in \mathbb{R}^2 (the plane) and
- s is a scalar.

For each of the following, decide if it makes sense and:

- if it makes sense, describe the answer, for example, “a vector in \mathbb{R}^3 ;”
- if it does not make sense, explain why, for example, “cannot add a vector and a scalar.”

(a) $s + (\mathbf{a} \cdot \mathbf{w})$ (b) $\mathbf{a} \times \mathbf{b}$ (c) $\mathbf{u} \times \mathbf{v}$ (d) $(\mathbf{a} \cdot \mathbf{b}) \times \mathbf{c}$

2. (12 points) Let $\mathbf{a} = \mathbf{i} + 2\mathbf{j}$ be a vector in \mathbb{R}^2 .

- (a) Find a vector in \mathbb{R}^2 the same direction as \mathbf{a} that has length 2.
- (b) Find a nonzero vector in \mathbb{R}^2 that is perpendicular to \mathbf{a} .

3. (6 points) A triangle has vertices $A(-1, 0, 1)$, $B(0, 2, 1)$ and $C(0, 0, 4)$. Find its area.

4. (5 points) Find an equation for the plane through the point $(1, 2, 1)$ which is perpendicular to the vector $2\mathbf{i} - \mathbf{j} + \mathbf{k}$.

Do NOT leave vectors in your answer.

5. (5 points) Find the distance from the point $(3, 2, 1)$ to the plane whose equation is $\langle 1, 2, -3 \rangle \cdot \mathbf{r} = 2$.
(As usual $\mathbf{r} = x\mathbf{i} + y\mathbf{j} + z\mathbf{k} = \langle x, y, z \rangle$.)
