Imagine there are three types of coins in circulation:

- $\mathbf{9 0 \%}$ of coins give tails with probability $\mathbf{1 / 2}$
- 9\% of coins are give tails with probability $\mathbf{3} / \mathbf{5}$
- $\mathbf{1 \%}$ of coins give tails with probability $9 / 10$

I find a (random) coin on the ground and I flip it. What is the probability I get tails?
