

Math 20E Homework Assignment 1
Due 11:00pm Tuesday, October 10, 2023

1. Find an equation for the tangent plane to $f(x, y, z) = \frac{xyz}{x^2 + y^2 + z^2}$ at $(x_0, y_0, z_0) = (1, 0, 1)$.
2. Compute the matrix of partial derivatives of $f(x, y, z) = (x + y, x - y, xy)$.
3. Let $w = x^2 + y^2 + z^2$, $x = uv$, $y = u \cos(v)$, and $z = u \sin(v)$. Use the chain rule to find $\frac{\partial w}{\partial u}$ when $(u, v) = (1, 0)$.
4. Let $g(u, v) = (e^u, u + \sin(v))$ and $f(x, y, z) = (xy, yz)$. Compute $\mathbf{D}(g \circ f)(0, 1, 0)$ using the chain rule.
5. Evaluate the iterated integral $\int_1^3 \int_1^2 \frac{xy}{(x^2 + y^2)^{\frac{3}{2}}} dx dy$.
6. Evaluate the double integral $\iint_R (x^2 y^2 + x) dy dx$, where $R = [0, 2] \times [-1, 0]$.
7. Compute the volume of the region over the rectangle $[0, 1] \times [0, 1]$ and under the graph $z = xy$.
8. Compute the volume of the solid bounded by the xz plane, the yz plane, the xy plane, the planes $x = 1$ and $y = 1$, and the surface $z = x^2 + y^4$.
9. Evaluate the double integral $\iint_D xy dA$, where D is the triangular region whose vertices are $(0, 0)$, $(0, 2)$, $(2, 0)$.
10. Evaluate $\iint_D y dA$, where D is the set of points (x, y) such that $0 \leq \frac{2x}{\pi} \leq y \leq \sin(x)$.
