1.2 Algebraic Structures of Subsets (II.4 in Driver)

Start with a sample space Ω (any set).

Definition: A collection $\mathcal{F} \subseteq 2^{\Omega}$ is a ________ if

1. $\Omega \in \mathcal{F}$, $\emptyset \in \mathcal{F}$
2. If $E \in \mathcal{F}$, then $E^c \in \mathcal{F}$.
3. If $E_1, \dots, E_n \in \mathcal{F}$, then $\bigcup_{j=1}^{n} E_j \in \mathcal{F}$
4. If $E_1, \dots, E_n \in \mathcal{F}$, then $\bigcap_{j=1}^{n} E_j \in \mathcal{F}$

If, instead of 3, we have the stronger

3'. If $\{E_j\}_{j=1}^{\infty}$ is a countable set of events in $\mathcal{F}$, then $\bigcup_{j=1}^{\infty} E_j \in \mathcal{F}$

then we call $\mathcal{F}$ a ________.

Examples

E.g. $\mathcal{F} = 2^{\Omega}$

E.g. $\mathcal{F} = \{\emptyset, \Omega\}$

E.g. $\Omega = \{1,2,3\}$ $\quad \mathcal{F} = \{\emptyset, \{1\}, \{2,3\}, \Omega\}$

E.g. $\mathcal{F} = \{B \subseteq \Omega : B$ is countable or B^c is countable$\}$

<u>Lemma</u>: If I is any index set and $\{\mathcal{F}_i : i \in I\}$ are σ-fields over Ω, then $\bigcap_{i \in I} \mathcal{F}_i$ is a σ-field.

Pf. 1. Ω

2. $E \in \bigcap_i \mathcal{F}_i$

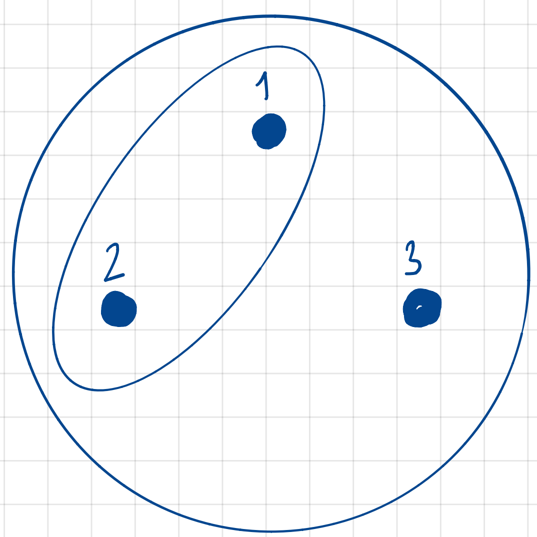
3. $\{E_n\}_{n=1}^{\infty} \in \bigcap_i \mathcal{F}_i$

Prop: Let $\mathcal{E} \subseteq 2^{\Omega}$ be any collection of subsets of Ω.
There is a unique smallest σ-field $\sigma(\mathcal{E})$ that contains $\mathcal{E}$. It is called the σ-field __________ by $\mathcal{E}$.

Pf.

///

E.g. $\Omega = \{1,2,3\}$, $\mathcal{E} = \{\phi, \{1,2\}, \Omega\}$



$\boxed{\text{Exercise}}$ Let $\mathcal{E}_1, \mathcal{E}_2 \subseteq 2^{\Omega}$. Show that
$\sigma(\mathcal{E}_1) = \sigma(\mathcal{E}_2)$ iff :

The Borel σ-Field

Let X be a topological space (e.g. Euclidean space $\mathbb{R}^d$).
The Borel σ-field $\mathcal{B}(X)$ is the σ-field generated by the open subsets in X.

$$\mathcal{B}(X) = \sigma\{\text{open subsets of } X\}$$

Events in $\mathcal{B}(X)$ are called Borel sets.

Fun Fact !: For $X = \mathbb{R}^d$, every open set U is a countable union of open balls

$$U = \bigcup_{i=1}^{\infty} B(x_i; r_i)$$

$$\therefore \mathcal{B}(\mathbb{R}^d) = \sigma\{\text{open balls in } \mathbb{R}^d\}$$

$d=1$: $\mathcal{B}(\mathbb{R}) = \sigma\{(a,b) : a<b\} =$
